

Manual Tester | API Testing (Postman) | Database Testing (SQL) | Agile | Functional – Regression | 1.7 Years

Name: Sumit Kumar
Mobile No: +91-8804776298
Email: sumit.shri.318@gmail.com

Notice Period: Immediate Joiner

Career Objective

- Experienced QA professional in Manual, API, and Database testing, with strong knowledge of SDLC/STLC and end-to-end validation, seeking a challenging role to drive product quality and reliability.

Profile Summary

- Software QA Engineer with around 1.7 years of hands-on experience in Manual Testing, API Testing, and Database Testing
- Strong experience in functional, regression, and integration testing of web applications
- Good exposure to API testing using tools like Postman and backend data validation using SQL.
- Experience in testing applications across E-commerce.
- Proficient in test case design, execution, and defect tracking using tools like JIRA.
- Good understanding of SDLC, STLC, and Agile Scrum methodology

Work experience

- Software Test Engineer at Accenture (Nayagara Technologies Ltd) | Dec 2024 – Present

Education

- M.C.A from RGVP University, Bhopal 2023-2025

Skill Set Summary

Manual Testing Skills

Smoke Testing | Sanity Testing | Integration Testing | System Testing | End-to-End Testing | Re-testing | Regression Testing | Compatibility Testing | Exploratory Testing | Ad-hoc Testing | SDLC/STLC | Defect Life Cycle | Test Plan | Test Case Design Techniques | Test Case Writing | Test Data Preparation | Test Case Execution | Defect Identification | Defect Debugging | Defect Reporting | Defect Tracking |

API Testing Skills

Postman | API Chaining | Collection Runner | Data-Driven Testing | Environments | JSON | XML |

Database / Backend Testing Skills

SQL | DML / DQL | Insert | Update | Select | Delete | Joins | Group By | Having

Agile Methodology & Tools

Agile Methodology | Scrum Framework | Sprint | Product Backlog Items (PBI) | Sprint Backlog Items (SBI) | Backlog Refinement | Sprint Planning | Daily Scrum Meeting (Stand-up) | Sprint Review Meeting | Sprint Retrospective Meeting | Sprint Demo | Carryover Stories | Agile Estimation |

Tools

JIRA | Test Rail | Dev Tools | Console | Network Tab

Strengths

- Excellent Communication
- Excellent analytical Skill
- Problem-Solving Skills
- Collaborator
- Individual Contributor
- Taking the Ownership

Project Details

Project 3: Ezbuy Cross-Border E-commerce & International Shopping Platform - Singapore

Duration: Jan 2025 – Present

Tools: JIRA, TestRail, Postman, Swagger, Confluence, Figma, SQL, Browser Stack

Project Description: Ezbuy is a cross-border e-commerce platform enabling users to purchase products from international sellers (China, US, Korea, etc.) with local delivery, consolidated shipping, customs handling, and multiple payment options.

Key Features –

- International product catalog browsing.
- Cross-border cart & checkout.
- Multiple seller and warehouse integration.
- International shipping & customs flow.
- Local last-mile delivery
- Order tracking & notifications.
- Refunds, returns, and dispute handling

Manual / Functional Testing Synopsis

- Around 1.7 years of hands-on experience in functional testing of web and mobile applications
- Actively involved in all phases of SDLC, including requirement gathering, analysis, design, testing, and delivery
- Hands-on experience across all phases of STLC, including requirement understanding, test scenario and test case design, and execution.
- Designed and developed test scenarios and test cases using black-box testing techniques such as Boundary Value Analysis, Equivalence Class Partitioning, Decision Tables, State Transition, and Error Guessing
- Executed test cases, identified defects, logged and tracked bugs, and followed up until defect closure.
- Performed various types of testing including Smoke, Functional, Integration, Re-testing, Regression, Sanity, System, End-to-End, Ad-hoc and Compatibility testing.
- Prepared and maintained Requirement Traceability Matrix (RTM) to ensure complete test coverage.
- Collaborated closely with developers, product managers to clarify requirements and highlight quality risks.

Agile Methodology - Working Experience

- Actively participated in Agile Scrum ceremonies including Product Backlog Refinement, Sprint Grooming, Sprint Planning, Capacity Planning, Daily Scrum (Stand-ups), Sprint Reviews, and Sprint Retrospectives
- Contributed to effort estimation using Story Points and Planning Poker techniques.
- Collaborated closely with product owners, developers, and QA teams to ensure timely and quality-driven sprint deliveries.
- Adapted quickly to changing requirements in a fast-paced Agile environment.

API Testing Synopsis

- Evaluated APIs (JSON) using Postman.
- Created and maintained Postman Collections, Environments, and Monitors.
- Implemented API chaining, parameterization, data-driven testing, and managed global, collection, and environment variables in Postman.
- Added assertions in Postman scripts to validate status codes, response time, headers, and response body.
- Performed request/response validation to ensure API functionality, reliability, and data integrity.

SQL - Database Testing Synopsis

- Written and executed SQL queries to validate API responses and ensure backend data accuracy.
- Prepared and maintained test data in the database to support functional and integration testing.
- Conducted data integrity and consistency checks across application workflows.
- Validated CRUD operations (Insert, Update, Delete, Select) triggered by UI and API actions.

Roles & Responsibilities

Requirement Understanding

- Analysed and understood requirement scope and identified potential impacts.
- Provided story point estimates using Agile Poker
- Coordinated with cross-functional teams to clarify requirements.

Test Case Design

- Designed Test Scenarios and Test Cases using various test design techniques.
- Conducted Test Case Reviews with peers, leads, and business stakeholders.
- Updated test cases based on review comments.
- Prepared test data required for execution.

Test Case Execution

- Executed test cases in QA environment after deployment of changes.
- Updated test case status based on execution results.
- Debugged defects to identify issues from front-end or back-end.
- Reported defects with detailed reproduction steps, logs, and screenshots.
- Participated in Defect Triage calls and tracked defects till closure.

Test Closure

- Provided test sign-off once all test cases passed and defects were resolved.
- Published test execution and defect reports.
- Prepared various metrics and dashboards after every Sprint.
- Performed sanity testing on UAT and PROD for release-level stories.
- Analysed production defects and prepared RCA reports for defect leakage.

Sprint-Level Meetings

- Actively participated in daily Scrum calls and weekly Sprint Review meetings
- Participated in Sprint Retrospectives and contributed improvement points
